

Scanned letter (sample)

Ada Example, 1 Sample Street, Exampletown

Dear reader,

This page is a picture of text, not text. It was made as an image and placed in a PDF, which is what a scanner does when it saves to PDF without running OCR (optical character recognition).

Try to select a word or search for one: nothing will be found, because the file holds pixels, not characters. Copying the page gives you an image, and a screen reader has nothing to read.

To make it searchable, run OCR on it. Many PDF editors and scanner apps can add an invisible text layer on top of the image.

Yours sincerely,

A. Example
